

## FX AND CRYPTO RETURN BOOSTER

### Active FX and Crypto management – Redefined with collective intelligence

Boost your clients' investment performance as well as your return on assets.

Our FX and Crypto Return Booster offers a unique way to manage clients' portfolios using daily investment signals.

#### WHAT WE DO

We source FX and Crypto investment signals from the leading hedge funds ...

... and make this collective intelligence directly accessible in Avaloq's Portfolio Management system.

#### Alignment to in-house investment view

Our Avaloq adapter allows your CIO office to add their global FX and crypto investment views. This sets benchmarks for exposure on a portfolio level according to your bank's internal processes.

#### Direct integration of signal intelligence

Hedge funds signals are structured and delivered directly into the adapter. Daily signals together with your bank's view allows the adapter to calculate the optimal position and the resulting trades for any portfolio.

#### Scalable across client groups

Our FX and Crypto Return Booster can be applied to a single client portfolio or scaled across groups of client portfolios through direct integration with Avaloq's PFM Module.
