New course: ABR/S Development and Customization Workshop

We are introducing the new **ABR/S Development and Customization Workshop course**, designed to turn knowledge into practice through an end-to-end implementation exercise. Participants will develop a new feature from scratch, applying the ABR/S coding guidelines and concepts covered throughout the customization certification courses. The workshop provides additional hands-on practice to deepen understanding and support preparation for both the **ABR/S theory** and **coding certification exams**.

Already ACCP certified? The workshop is also a great opportunity to refresh and expand your practical skills while **earning education points towards maintaining your certification**.

From **November 2026**, the workshop will be integrated into the redesigned **ACCP (Core-ABR/S) Intensive Bootcamp**, complementing the instructor-led training and self-study with a dedicated practical component. It will also be available as a **standalone elective** for anyone looking for additional hands-on practice, particularly when preparing for the ABR/S coding exam.

DepEd Honours Avaloq Academy

What an honour to be recognised by the Department of Education (DepEd) Laguna, a government education authority in the Philippines, for our outreach programme! The initiative supported teachers and students through sessions on instructional design, programming, financial literacy and multimedia design. Avaloq also donated 30 monitors and 20 laptops to strengthen the school's computer laboratory and expand access to digital learning. We're already looking forward to the next opportunity to learn, share and make a difference together!
