

Spotlight on the Integration track

Following the recent Avaloq Knowledge Day, we're putting a spotlight on our Integration track that was presented. As you've heard, Integration at Avaloq is more than just a course — it's a structured learning path. Beginning with the Integration Use Cases course, we offer a clear progression through our integration products, allowing professionals to build targeted expertise. Explore the product-specific deep dives then complete and validate your proficiency in the final exam.

Become an Avaloq certified integration professional
Academy courses

AMI Web Services and APIs Avaloq REST API products such as AMI Web Services and Avaloq's off-the-shelf API products	Community APIs asynchronous write Triggers async requests to create /update an entity	CAPI - bulk STEX Manages bulk STEX orders within the ACP	Business Event Grid (BEG) Demonstrates how to create BEG stream tasks that will asynchronously push tailored messages to third party applications

Integration exam

Once all courses in the Integration track are successfully completed, participants are eligible to sit the certification exam. The **Avaloq Certified Integration Professional** qualification indicates students have acquired a substantial set of knowledge and skills with Avaloq integration products.

The certification exam is a proctored assessment based on the Integration courses completed as part of the learning track.

To stay up to date, participants are encouraged to regularly check the **Academy Update site**, as new integration content may be reflected in future exam questions. More details coming in next month's newsletter.

New course

Client Lifecycle Management (CLM) Introduction

Our latest course, **Client Lifecycle Management (CLM) Introduction**, provides an overview of Avaloq's browser-based CLM solution. The course guides participants through the core concepts and capabilities of CLM, including:

- the CLM architecture and available customisation approaches
- the CLM user interface and its support for effective client management
- the structure and purpose of configuration files
- the principles of case management and how they are applied in CLM
- working with Avaloq Forms within CLM
- defining and triggering actions and decisions
- implementing and triggering order validation from CLM
