ACCP on a streak!

Did you know that the Avaloq Certified Customization Professional programme has gained a lot of traction in the past three years? According to registrations and forecasts, we are expecting to train more than 370 professionals this year—this is the highest figure in any of the last five years.

But why is the course almost a month long? Here are some facts and figures:

- 175: Minimum料
- 63: days devoted and described
- 97: exercise devoted and instructing, percent
- 482: student book pages written

The course gives students a basic skill level in ABS customization to address client requirements. Participants learn about customization tools, engines, workflows, user interfaces, order validations, and other important customization areas. The knowledge gained is essential for anyone who will work in Avaloq implementation projects.

As the course is in high demand, we've already started planning for 2023 so keep an eye on our website.

Community API - Under the hood all set

I had the pleasure of attending the pilot Community API - Under the Hood course a few weeks ago. We learned about the inner workings of the Community API (CAPI) in OpenShift, and it was fascinating to see how they all mesh. It was delivered workshop-style through a theory presentation followed by hands-on practice.

It would be particularly interesting for anyone involved with Community APIs (CAPI), with the added advantage that there is no prior self-study—ideal for all busy people!

I can tell that this course will be one of our bestsellers this year so don't miss it!

Jamie Wady

Responsive Forms / Webforms
3 August 2022
This course is primarily intended for customization specialists working with graphical interfaces. It will give you an introduction to the functionality and customization of user interfaces and some closely related topics like presentation spots. To enhance the learning experience, this course provides several demonstrations and practical examples.

Delta 2019H2 (Migration API)
18 August 2022
The focus of this course is an introduction to the Migration API - part of Avaloq’s Avaloq Open Interface concept that is used to migrate an existing banking system to the latest version of the Avaloq Banking Suite. This course also covers new features for customizers, largely based on what has been brought to the market since the second half of 2019.

Delta 2020H1 (Avaloq Container Platform Reference ACFR)
24 August 2022
In this course, you will learn what Avaloq’s rationalize and benefits are for this technology shift. The course covers a wide range of topics on how to understand the ACFR, how to get around the repository, how to configure it, and where to find information. You will also get an overview of the deployment concepts and see how monitoring and alerting are set up. Lastly, demonstrations and exercises will be provided to cover the mentioned technologies.
